The need for simple modern AV

Carillion Communications carried out major upgrades to the audio visual systems at London Fire Brigade headquarters in Union Street, London. The need to upgrade was driven by the fact that the London Fire Brigade wanted to install equipment that is easy for users to understand and highly reliable. The objective was to have equipment, from projectors right up to larger systems, whose performance is entirely predictable, especially at critical times.

Room standardisation

Carillion undertook a site survey. Meeting spaces were fitted with powerful projectors and multiple 43", 49" and 75" screens. Speakers, amplifiers, induction loop systems and various microphone types were installed. Wireless display adaptors, conference cameras and push button wall panels were installed across all rooms to achieve standardisation and support London Fire Brigade's "simplicity" objective.

The atrium

Carillion replaced an old video wall in the LFB atrium with a 98" monitor that serves several purposes.

The Commissioner's suite

The Commissioner's suite is a busy area used extensively by Directors and senior management on a daily basis. The suite was upgraded with several large monitors. The monitors can also show separate feeds on four monitors simultaneously.

Being prepared for large public presentations

Carillion installed equipment in three large rooms on the ground floor that open up to create one very large space. The AV equipment is flexible and switchable to enable high quality sound to every corner of the room, with repeater monitors to ensure that on-stage activity is clearly visible to all attendees.

Project overview

Project: Upgrade A/V equipment

Objective: AV upgrade of all conference rooms and atrium from analogue to HDMI

Location: London

Tech spec:
 NEC PX700W projector
 Crestron controller
 1 x 98" monitor
 7 x 75" screens
 2 x 55" screens
 11 x 43" screens
 Conference cameras & sound station
