

Video Conferencing Applications for Higher Education

StarLeaf cloud video conferencing solutions enable students, educators, and administrators to connect at a distance wherever or whenever needed. With StarLeaf, the boundaries of the classroom can be extended globally, enabling connections with content providers and experts around the world. The StarLeaf OpenCloud platform is scalable, cost-effective, and easy to use, intuitive and requires no training.

Specific Higher Education applications include:

-  **Staff development**
-  **Expanding the curriculum**
-  **Personalized learning**
-  **Sharing content and educational resources**
-  **Using cost-effective instructional technology**
-  **Expanded collaboration**
-  **Virtual field trips**

StarLeaf features for higher education providers:

Access to global content and educational resources:

Capture and share instructional material, data, documents, graphs, charts and images via video during a video call or meeting.

Instant one-on-one mobile communications:

Ideal for peer-to-peer conversations, virtual office hours, tutoring sessions and reaching homebound students.

Unlimited point-to-point video meetings:

Use StarLeaf cloud video conferencing systems to call into live instructional classes or to another classroom.

Scheduled collaborative group meetings:

Bring together multiple locations in one video for an interactive discussion, study session or administrative planning meeting, with each participant calling into a virtualized meeting room from any standards-based video system or video-enabled mobile device.

Directory of contacts:

Scroll and search class lists or faculty with directories you can customize.

Recording lectures and events:

Record educational events using StarLeaf Encore recording service with no need for additional equipment or infrastructure.
